

June 22, 2008 Storm Report

June 22, 2008 saw a major rain storm in Tavistock and surrounding area. Local reports indicate there was 2 $\frac{3}{4}$ to 3 $\frac{3}{4}$ inches of rain over a fairly short period of time. There were no major problems reported to the Township. There were some isolated problems investigated, but they were not related to a failure of Township infrastructure. They tended to involve local lot grading issues, sump pump failures, etc.

Observation of the new swales and drains indicated everything was working as designed.
